Introduction

WaveCart is the original on-screen, Cart Machine in use by thousands of broadcasters around the World and was even used at the Atlanta Olympic Games!

WaveCart uses a standard PC and sound-card to play back multiple audio files, optionally to different audio outputs and can automatically sequence from one deck to another.

Each of the decks has a label clearly showing information about the audio file being played and there are timers showing Elapsed, Remaining and Intro countdown.

As well as up to 10 on-screen decks, an additional 24 HotKeys are available for frequently used audio files.

Information about how to get started with WaveCart is explained in the <u>QuickStart</u> section.

For any questions of a technical nature related to WaveCart, please refer to http://support.bsiusa.com

Getting Started

Consult the following sections for information on installation, configuring, using and getting the most out of WaveCart.

- Installation
- Starting the program
- QuickStart Guide
- Adding New Files
- Main Screen
- Security Options
- Registration & Validation
- Support

Installing WaveCart

System Requirements

The computer system needed to run WaveCart very much depends on exactly what you want to do. WaveCart will run on a wide range of computers, but some features will require more than a bare-bones minimum.

Bare-bones Minimum

Intel Pentium 4, 1.8Ghz Processor (we do not recommend AMD, Cyrix or Celeron processors) Microsoft Windows XP Professional SP2 (we do not recommend using any operating system designed for Servers as these are not optimized for multimedia use) 1GB memory USB Port (for Hardware Key) At least one Sound Card, with Windows MME Wave Drivers

Recommended Configuration

Intel Core2 Duo, 2.4Ghz or higher Windows XP Professional SP3 or Windows 7 Professional 32bit 2GB Memory USB Port (for Hardware Key) 2 x SATA Hard Drives (one for Windows, one for audio files) Professional Sound Card with multiple audio streams

Optimization

Most off-the-shelf PCs are designed and configured for home or small office use. The demands of a multimedia computer running 24/7 are very different.

While WaveCart will run with either configuration, for maximum performance and long-term stability we highly recommend purchasing a correctly configured, custom multimedia PC directly from BSI.

Our technical support department can assist you with any software or hardware purchased directly from BSI, but we cannot guarantee to assist you configuring computers purchased elsewhere and / or may make a charge for doing so.

If you plan to supply and configure your own PC, we highly recommend obtaining a copy of the Microsoft Resource Kit and ensuring that you have optimized your computer for performance rather than appearance.

Installation

To Install WaveCart from the BSI Install CD, insert the CD into your CD-ROM drive.

If you have disabled the autorun feature of your CD-ROM, run the **setup.exe** file on the CD.

Use the drop-down box to select WaveCart and then click the Install button

Follow the on-screen prompts, and selecting **Full** if you are installing for the first time, or **Upgrade** to preserve settings from a previous installation of WaveCart.

IMPORTANT NOTE:

WaveCart 5.0 requires a Hardware Key to validate the program. Please ensure that you have installed the **Sentinel Driver** before trying to register the program. You'll find a copy on the BSI Install CD and on the drivers page of our Web Site.

Uninstalling

To Uninstall WaveCart

- 1. Click the **Start** button.
- 2. Select Control Panel.
- 3. Double-click **Add/Remove** Programs.
- 4. Click Change or Remove Programs.
- 5. Then select **WaveCart** from the list of programs that can be automatically removed.
- 6. Click the **Remove** button to uninstall WaveCart.

WaveCart's uninstall program will have deleted any files it created that are no longer is use by any other programs still installed on your PC.

It will not delete any user generated files, including Audio Files, Events Logs, Stacks etc.

QuickStart

Starting WaveCart

To start WaveCart, click the WaveCart icon found in the **Start** menu, in **Programs** > **Broadcast Software**.

You can also double-click the Desktop Icon. \

WaveCart installs some sample audio files* which by default are installed in **c:\bsi32\audio**.

You'll see the sample audio files in the **Audio List** on the right-hand side of WaveCart's main window.

If you have difficulty reading the details, **Right-Click** and select **Change list font** to select a larger font.

To view more than just the Artist and Title, select **Show Details** from the same menu. You'll then be able to see more information about the audio file such as OutCue, Intro, Length and Start and End Dates.

* To reduce size, the supplied sample audio files are 16-bit, 22Khz, Mono. When you add your own audio files, we suggest using 16-bit, 44.1Khz, Stereo files (linear PCM .wav) although WaveCart will also play MP3 and MPEG Layer 2 files (if your audio card supports MPEG Layer 2 playback, or if you have a suitable audio codec).

Play in Preview Deck	Ī
Edit Audio File	
Edit Audio Info	I
Delete	l
New Cart	ſ
Refresh List - All Folders	
Sort By	I
 Show Details 	ł
Change list font	
Export Audio List	J

To load audio files into the play decks, **click** the audio file and then the numbered button of the deck you wish to load. (You can also **drag and drop** the audio file into the play deck too).

The control buttons will no longer be grayed out and you can **Play**, **Pause**, or **Eject** the audio file by clicking the relevant buttons.

When a file is playing, the eject button is replaced by a **Stop** button.

Adding New Files

As previously mentioned, sample audio files are installed in **c:\bsi32\audio** and any additional files saved into the same folder will appear in the **Audio List**.

We recommend using a separate hard drive for your audio files and it's easy to configure WaveCart to monitor additional folders for new audio files using the companion **SoundHound** utility. The utility constantly monitors selected folders for new or modified audio files and keeps WaveCart's **Audio List** up-to-date.

SoundHound is usually automatically launched when WaveCart starts and appears as a pair of binoculars in the System Tray. Double-click the icon to view **SoundHound**.

From the **Folders** tab click the **Add a folder** icon and browse to the folder you want to add. We recommend using up to 8 folders and that all folders should be on your local hard drive. While there are no physical limitations in WaveCart that prevent you doing otherwise, we are unable to support any issues arising out of your failure to adhere to our recommendations.

Rather than reference different folders by their actual paths, you can give each path a **friendly** name (for example, Songs, Spots, Sound Effects, etc.) and tell WaveCart to display the friendly name instead (in the Program Options).

When you no longer want to monitor a folder, highlight the folder you want to remove and click the **Remove a folder** icon.

There are two diagnostic functions on the **Folders** tab which are useful when optimizing or troubleshooting your system.

Firstly, the location and size of the **Audio Database** are easily obtained from this screen. Over time, the database will increase and should be deleted (with WaveCart shut down). It will be automatically rebuilt once WaveCart is restarted.

Secondly, the **Monitor** column indicates whether or not there's a problem monitoring a particular folder. If all is well, you'll see an **OK** in this column.

🕖 Sound Hound	d			
File View				
Folders Audio F	iles Options Log	Status About		
Audio Database:	C:\BSI32\audio.mdb)	164K	
Folders:	Friendly Name	Folder	Monitor	
	Virtual Carts	d:\audio\carts	OK	
	Sound Effects	d:\audio\fx	OK	
	Songs	d:\audio\songs	OK	V
	Commercials	d:\audio\spots	OK	
	Liners	d:\audio\liners	OK	
	Jingles	d:\audio\jingles	OK	

NOTE: WaveCart has been designed to work optimally with the number of files most stations schedule, between 2,500 and 3,500. We do not recommend using more than 5,000 files (the number of songs you can comfortably store on a single 250 GB hard drive) as performance will reduce after that point due, in part to the larger database.

Main Screen

WaveCart's main screen displays up to 10 Play Decks and the **Audio** List. Use the **Window > Optimize Display** menu option to fit the maximum number of decks on screen.

The left-hand scroll bar can be used to scroll the decks up and down if your display will not accommodate all ten decks on screen at the same time.

The right-hand scroll bar is used to navigate through the list of audio files.

The Status Bar at the bottom of the user interface contains 10 deck position indicators and buttons for **AutoStep** and **Loop**.

AutoStep & Loop

The **AutoStep** feature allows play decks to sequence automatically. This is useful for segueing songs automatically, or running a spot break.

Loop allows play back to continuously sequence through the decks (this relies on the Program Option to reload a deck once playback has finished). This is especially useful where virtual carts are used and can form a rudimentary automation or sustaining service.

The **AutoStep** and **Loop** indicators can also be used to toggle each option on and off. Green indicates the feature is active, while red shows that the feature is not in use.

AutoStep	Loop
----------	------

Level Meters

If the sound card you're using provides a Windows MME compliant Peak Meter control (such as our recommended AudioScience cards) then WaveCart will display the audio level on each deck's meters. Most domestic and many semi-pro sound cards do not provide a Peak Meter control.

Timers

Each deck has three timers; an **Intro** countdown is displayed in blue, the **Elapsed** time is shown in green, and the **Remaining** time is shown in red.

Deck Label

When loaded, the play deck label will display the audio filename, Artist & Title information together with (depending on the display height chosen) the **OutCue**, **Length, Intro, Segue, File Type**, **Category, Start Date**, and **End Date**. Massive Attack Teardrop Q: ...fades Len: 05:28 Int: 00:43 Seg: 00:12 MP3 AUDIO S: 2000/01/01 E: 2010/12/31

While playing, the label background turns Green.

When a deck is paused, it turns **Cyan** and (if **Attempt Segues** is checked) will automatically start when the deck before it reaches the Segue point.

While a deck is fading out (if the pertinent fade options have been configured), the label turns **Yellow**.

WaveCart will also look at the Start and End Date of an audio file and warn you that the audio file is not valid for play by turning the background color **Red**. WaveCart will not prevent you from playing the file though. The label will also be turned **Red** when an error situation occurs, such as attempting to load an audio file that can not be found.

Double-clicking on the deck label will perform a search of the currently displayed audio list for the currently loaded audio file. If a cart is loaded in the deck, double-clicking on the label will search for the

cart file, but holding down the Shift key and double clicking will search for the current audio file from that cart.

Hovering the mouse cursor over the artist or title fields will pop-up a tool-tip with the file name of the currently loaded audio file

When a Cart is loaded, the Cart logo will be displayed in the upper right corner of the deck label. If that deck is not currently playing, single left-clicking on the icon will load the next item in the cart. Double left-clicking on the icon will reload the next-to-play event for non-randomized carts. Right clicking on the icon will open the currently loaded cart in the Cart Editor.

Hovering the mouse cursor over the cart icon will pop-up a tool-tip with the file name of the currently loaded cart.

Play Controls

The touch-screen compatible **Play Controls** allow you to Play, Pause and Stop a file. (If the file is already stopped, you can Eject the deck).

Audio List Controls

By default, the **Audio List** will show the contents of all folders monitored by **SoundHound**. Using the drop down box you can limit the audio list display to any single folder that SoundHound is monitoring.

Using the **Find** button, you can search the **Audio List** for a particular phrase (for example, Artist or Title).

Take On Me

Status Bar

The **Status Bar** provides a handy visual reference to the play position of each of the decks. Clicking on any of the deck position indicators will cause the deck stack to scroll to that deck if your current WaveCart window isn't showing all decks on the screen at once.

Menus

File

- Open Stack Opens a previously saved Stack of play decks
- Save Stack Saves the currently loaded Stack of play decks
- Save Stack As Allows you to save the current Stack of play decks with a different name
- Exit Shuts down WaveCart

<u>Edit</u>

- New Cart To create a new Virtual Cart, click this option
- Edit Audio File Opens your (optional) Audio Editor application, such as Adobe Audition. (The path to this must be setup in the **Program Options**).
- Edit Audio Info Launches the BSI Info Editor allowing you to store additional information inside the audio file itself
- **HotKeys Setup** Launches the HotKeys setup allowing you to select the Current and StartUp HotKeys sets.
- Find Allows you to search the Audio List for a phrase (such as Artist or Title)
- Find Again Searches the Audio List for the next instance of a phrase

<u>Tools</u>

- **Update Folder List** Refreshes the audio folders and the Audio List with the current SoundHound data.
- AutoStep Activates automatic sequencing of the decks
- HotKeys Displays the current HotKeys Palette
- Loop If decks are not cleared after they have played, then WaveCart will sequence from deck 1 to 10 and then restart deck 1 again and loop the decks.
- Deck Height Adjust the height of the Play Decks
- Clear Decks Unloads all decks
- Pause All Decks Pauses all currently loaded decks, allowing them to sequence automatically if the relevant options are selected
- **UnPause All Decks** Clears pause and places decks into stopped mode. Decks will no longer automatically sequence
- Program Options Displays WaveCart's Program Options

Window

• **Optimize Display** – Maximizes the number of decks displayed on screen based on your screen resolution.

<u>Help</u>

- WaveCart Help Opens the Help File
- **Technical Support** Opens your default Web Browser and navigates to the BSI Support Centre (requires Internet Access)
- Security Allows access to WaveCart's Security Options
- **Register** Validates your Hardware Key with the provided Validation Code to prevent WaveCart shutting down every few minutes
- About Display the Registration Status and WaveCart Version.

Audio List (Right-Click Menu)

- Play Auditions the highlighted file
- Edit Info Launches the Info Edito
- Edit Audio Opens your (optional) Audio Editor
- Delete Permanently deletes the currently highlighted file
- New Cart Creates new Virtual Cart
- Refresh List Refreshes the audio list (forcing a database refresh)
- Sort By Sorts the audio list using any one of the following parameters:
 - Artist/Advertiser Category Description End Date Length Name Start Date
- Ascending Sorts the list in Ascending order
- Descending Sorts the list in Descending order
- Show Details Toggles whether full or limited details of each audio file are displayed
- Change list font Allows you select a different Windows font for the Audio List

Play Deck (Right-Click Menu)

- Quick Load Allows you to quickly enter a known filename to load into the selected deck
- **Scrubber** Opens up a scrubber allowing you to navigate through the audio file. Click the **X** to close the scrubber.

<u>About</u>

The **Help > About** menu option displays information about WaveCart including the full version number and registration status.

You can also view the full **License Agreement** from this screen.

Cart Viewer

As well as audio files, WaveCart supports the use of **Virtual Carts** (the ability to store multiple audio files in a single file). Within WaveCart (and BSI Simian) Virtual Carts are often abbreviated to Carts but are otherwise identical.

Events inside a virtual cart can either be played individually, with the next (or optionally random) file played next time the cart is played...or multiple events can be played 'back-to-back' (but not overlapped).

Launch the **Cart Viewer** from the Audio List's right-click menu or right-click any existing cart (colored green in the Audio List). You can also open the Cart Viewer using the **Edit > New Cart** or **CTRL+R** shortcut.

Create a new blank cart by clicking the **New Cart** icon and drag files from the Audio List into the cart.

🚾 Cart ¥iewer -	Untitled		
File Edit			
	è 🖺

barking	00:01	AUDIO	FX - Woof!
blip2	00:01	AUDIO	FX - Blipping
carhorn	00:01	AUDIO	FX - Toot
drain	00:02	AUDIO	FX - Drain
fanfr	00:02	AUDIO	FX - Fanfare
horse	00:01	AUDIO	FX - Horse

Using the **Edit** menu, you can Cut, Copy, or Paste files within a cart. To make an individual item in a cart next to play, use the **Edit > Make Next** option.

If you need to play multiple events in a cart back-to-back (it is not possible to overlap items within a cart, only between *different* carts and / or audio files) use the + key on each subsequent event you want to play. (The first item in a cart cannot have a + mark otherwise the cart would loop continuously).

In the example below, three events will play each time the cart is used. You can toggle the + mark with the + key on your keyboard.

File Edit		
Cue Name L		
Cue Name L

Average Length

Although optional, it's useful to enter an accurate value here so that when the Audio List is sorted, the cart is displayed in the correct position.

Carts are colored green in the Audio List.

SONGS - Randomized Songs

Randomize

Events within a virtual cart can be randomized. This makes them ideal for things like rotating liners, jingles, filler music, etc.

When the randomized option is selected, each time the cart is played a random event will be selected from those events in the cart that have not already been played. When all events have been played, the process is restarted.

As carts are written to each time they're played (to update this information) it's important to ensure that carts are in a folder of their own. Otherwise, each time a cart is played, it could trigger a SoundHound refresh of your entire music library.

Play Hooks Only

When this option is selected, WaveCart will only play the section of the song in the cart that you have designated as the **Hook** using the Info Editor tool.

Utilizing this feature provides the opportunity to forward sell songs that are coming up by dragging a selection of upcoming songs into a cart and selecting the **Play Hooks Only** option.

Copy Text

Although originally intended to display live copy for spots, WaveCart customers around the World have also found other novel uses of embedding textual information into their audio files which is displayed when the file is played.

For example, the latest Weather or Traffic Reports can be displayed when the relevant bed is played; or the latest news headlines when the News Sounder fires. Or you could embed liner notes for all your latest play list songs.

The information displayed is embedded into the audio file using the Info Editor **Copy** field.

This text information will be displayed when the file is	
played.	

Any information entered into that field can be displayed each time that file is played. Just activate the option from the main **Program Options**.

HotKeys

As well as WaveCart's 10 play decks, there are an additional 24 **HotKeys** which are played using the F1 to F12 and SHIFT+F1 to SHIFT+F12 buttons on your keyboard, or from the **HotKeys** palette.

To view the HotKeys palette, click **Tools > HotKeys** from the main menu. You can re-size the palette horizontally if you find that, as in the example below, not all the HotKey names fit in the default space provided.

HotKeys		
F1 - FX - DTMF Tones	F2 - FX - Time Signal	F3 - Reel World - Kiss 108 FM Boston

F7 - Production FX Library - News Sounder	F8 - Alan Jackson - Mercury Blues	F9 - George Michael - Faith
F10 - The Knack - My Sharona	F11 - Celine Dion - That's The Way It Is	F12 - 10,000 Maniacs - Hey Jack Kerouac
Shift+F1 - Mariah Carey - Prisoner	Shift+F2 - Gloria Estefan "Miami Sound Machine - Conga!	Shift+F3 - Various - Hooks Only Demo
Shift+F4 - Various - Randomized Songs	Shift+F5 - WaveCart - Play Hooks Intro	Shift+F6 - FX - DTMF Tones
Shift+F7 - FX - Time Signal	Shift+F8 - Reel World - Kiss 108 FM Boston	Shift+F9 - Reel World - KASE 101 Austin
Shift+F10 - Reel World - WLIT Chicago	Shift+F11 - Production FX Library - News Sounder	Shift+F12 - Alan Jackson - Mercury Blues

WaveCart supports multiple Hotkeys Palettes which are setup from the **Edit > HotKeys Setup** menu.

Assign the HotKeys by dragging files from the **Audio List**. (F13 to F24 refer to the SHIFT+F1 to SHIFT+F12 buttons).

To remove a previously assigned event, highlight it and click the **Clear HotKey Event** icon.

Click the **Save HotKeys Set** button when finished.

Use the drop down boxes to select the **Current HotKeys** and the HotKeys set loaded when WaveCart is restarted.

Registration

To purchase a copy of WaveCart, visit <u>http://www.bsiusa.com</u>.

IMPORTANT NOTE: WaveCart requires a Hardware Dongle; please ensure that you have installed the **Sentinel Driver** and inserted the USB Hardware key before registering the program.

Once you have purchased your copy of WaveCart, you will be provided with a USB Hardware Key and corresponding **Validation Code**.

You need to **Register** the program with the **Validation Code** to prevent the program shutting down every few minutes.

- 1. Select **Help** > **Register** from the main menu
- 2. Check that **Your serial number** matches the one written on the tag attached to your Hardware Key and enter all your information shown on the screen below.

Ha Please input your customer informatio Pirst Name* Alex Company / Organization Broadcast Software International Street 1 503 E 11th Ave	ardware Key Found, using on and validation code. Last Name* Roy	; Driver: 7.4.0-5

- 3. Enter validation code as provided with your hardware key. Click **Done** when finished.
- 4. WaveCart is now registered (you can check on the **Help** > **About** screen and will no longer shut down every few minutes.

Security

To prevent users having access to all of WaveCart's features, you can optionally password protect some of the main menu options.

To setup WaveCart's security options, click **Help** > **Security** from the main menu. The first time you do this, you'll be asked to choose a **Security password**.

Please type your Security Password in the box below	OK
	Cancel
	Cancer

PLEASE DO NOT FORGET THIS PASSWORD AS YOU CANNOT MODIFY THE SECURITY SETTINGS WITHOUT IT!

Make a note of your chosen password in safe place, enter is twice as directed, and click **OK** when done.

Hide FILE menu and prevent SHUTDOWN	Change Password
Hide [PROGRAM] OPTIONS menu	
Hide [ENTIRE] TOOLS menu	New Password
DO NOT FORGET YOUR PASSWORD: You will not be able to access these security options again if you lose or forget your password.	Confirm New Password

Security Options

- **Hide FILE menu** This hides the main **File** menu and removes all the options, including the ability to shut down WaveCart.
- **Hide TOOLS menu** This hides the main **Tools** menu and removes all the options, including the **Program Options**. As hiding this menu also removes the shortcut to pause or clear all decks most users are likely to chose to hide the [Program] options only.
- Hide [PROGRAM] OPTIONS menu Rather than restrict use of all the features available on the Tools menu, selecting this option will just hide the **Program Options** menu.
- **Change Password** From time to time, you may wish to update the security password. Please make a careful note of the new password and update your records as you will not be able to access the security settings without the password.

Old Password	
New Password	
Confirm New Password	

Stacks

WaveCart can save and recall stacks of decks, making it easy to save, load, and reuse frequently used collections of carts or event entire spot breaks.

When **Stacks** are saved, you can optionally enter additional information such as an **Air Date** together with Description and additional comments.

This information is then displayed in the **File > Open Stacks** menu option.

Coast FM - The Most Of The Coast

Coast FM - The Most On The Coast

<u>Startup Settings</u>

Use these options to select which features are active when WaveCart is started. These options can also be turned on and off while WaveCart is running.

- •Loop WaveCart will be placed into Loop mode, continously sequencing play decks
- Details Audio List Show Full Details selected
- •AutoStep Play Decks will automatically sequence
- **Deck Height** Selects the vertical size of the Play Decks.

System Options

- •Attempt Segues If supported by your sound card, WaveCart attempt to overlap play decks when in AutoStep mode. The next deck will be started when the Segue point of the previously playing deck is reached.
- •**Default Segue** If no Segue Marker has been placed in the audio file, the default segue length is used.
- •End Event Behavior Usually, it's desirable to Clear Deck to prevent replay of the same event. The **Reload Deck** option is useful when WaveCart is in **Loop** mode, perhaps with randomized carts, to provide a continous audio feed.

<u>Text Settings</u>

• You can customize the font and font size when the **Display text when cuts are played** option is selected. This display any text entered in the **Copy** field of the audio file using **Info Editor**.

Deck Labels

- **Display Cut Labels During Cart Play** This option forces the Play Deck label to display the audio file information from within the cart, rather than the generic Virtual Cart information.
- **Auto-Scroll Long Labels** With this option enabled, if the text in a deck's display label is too wide, it will automatically scroll so you can see the full text. Several scroll styles are available from the **Auto-Scroll** dropdown.

SoundHound Settings

Use SoundHound

Unless another BSI application is already running SoundHound on your PC, then this option should be checked. WaveCart will continue to work if SoundHound is not running, but will not add any new files to the Audio list.

Paths

Windows Path	Friendly Name
s:\bsi32∖audio	BSI Audio
t:\my music wavs	My Music
1:\klife\vtrack files	No friendly name available
 Use friendly names in folders lists ther Paths 	
Use friendly names in folders lists other Paths Audio database	
✓ Use friendly names in folders lists ther Paths Audio database ::\bsi32\audio.mdb	Set

Audio file paths are setup using the **SoundHound** utility, selecting the **Use friendly names in folders lists** option displayed the friendly name in the Audio Folder List instead of the full file path.

All Folders	•	4
All Folders Virtual Carts		-
Sound Effects		
- Commercials	2	
Liners		

•Other Paths – Allows you to set paths to a different audio database, an optional Audio Editor (not supplied) and the folder for your Stacks.

Playback

The Playback tab allows you to assign a different wave out device or sound card for each of the Play Decks, the HotKey & Trigger Decks and the Audio list Preview Deck.

It is not uncommon to only use two wave out devices for the main play decks, routed to two different physical outputs, with odd decks assigned to one output and even decks to the other - with a domestic on-board audio card routed to a pair of PC speakers for audition / preview purposes.

However, WaveCart supports a different output for each of the 10 onscreen and two hidden decks (HotKeys/Triggers deck & Preview deck). The capability of your sound card will determine how many files can be played back at the same time and how many different devices are available.

Hardware

🕅 WaveCart Setup	
General Paths Pi	ayback Hardware
	Keyboard De-Bouncing ✓ Ignore Subsequent Key Strokes For 100 ↔ (ms)
	Spacebar behavior while playing
	C Overlap to next event
	Jump to next event
	Audio Mode
	C DirectSound ()
	Force use of software CODEC
	OK Cancel

Keyboard De-Bouncing

If you find that keys are accidentally being double-pressed, you can configure the **Keyboard De-Bouncing** option to ignore keyboard presses that occur more often than a specified length of time. Simply enable the **Ignore Subsequent Key Strokes** check box, and set the time selector to the desired number of milliseconds.

Spacebar Behavior While Playing

Use this option to determine what effect pressing the Spacebar has when a deck is playing.

<u>Audio Mode</u>

• **Standard** – This is the default audio mode, requiring multiple play streams (or multiple sound cards) in order to overlap files.

- **DirectSound** When DirectSound mode is selected, then providing your sound card has full (not emulated) DirectSound support (and DirectSound is available on your PC) you can overlop multiple audio files using a single audio device even if your audio card usually only allows a single audio file to be played at the same time.
- Force use of software CODEC WaveCart supports playback of Linear PCM (.wav), ADPCM, MP3 and MPEG Layer 3 file formats. If a format is not directly support by your audio card, this option forces audio to be played through an optional Windows ACM codec instead. Most modern PCs are supplied with an MP3 codec, but you may need to purchase a special MPEG Layer 2 ACM codec from BSI to support playback of MPEG Layer 2 (including Content Depot) files.

Support

Technical Support for WaveCart is provided by our online Support Center at <u>http://support.bsiusa.com</u>.

Information about product updates and answers to common questions are available 24-hours-a-day.

If our **FAQ** or **User Forum** doesn't provide the answers you need, or if you have a problem of a technical nature relating to our software or any hardware we have supplied, then please use the links provided to submit a Support Ticket.

We aim to respond to all **Support Tickets** within 60-minutes during normal weekdays, from 6am to 6pm (PST).

Please note that **Telephone Support** for WaveCart is only available to customers that have purchased a Tech Support Plan; and we cannot undertake to diagnose or configure hardware that we have not directly supplied.
