18 September 2009 – What's new in Simian document v2.0

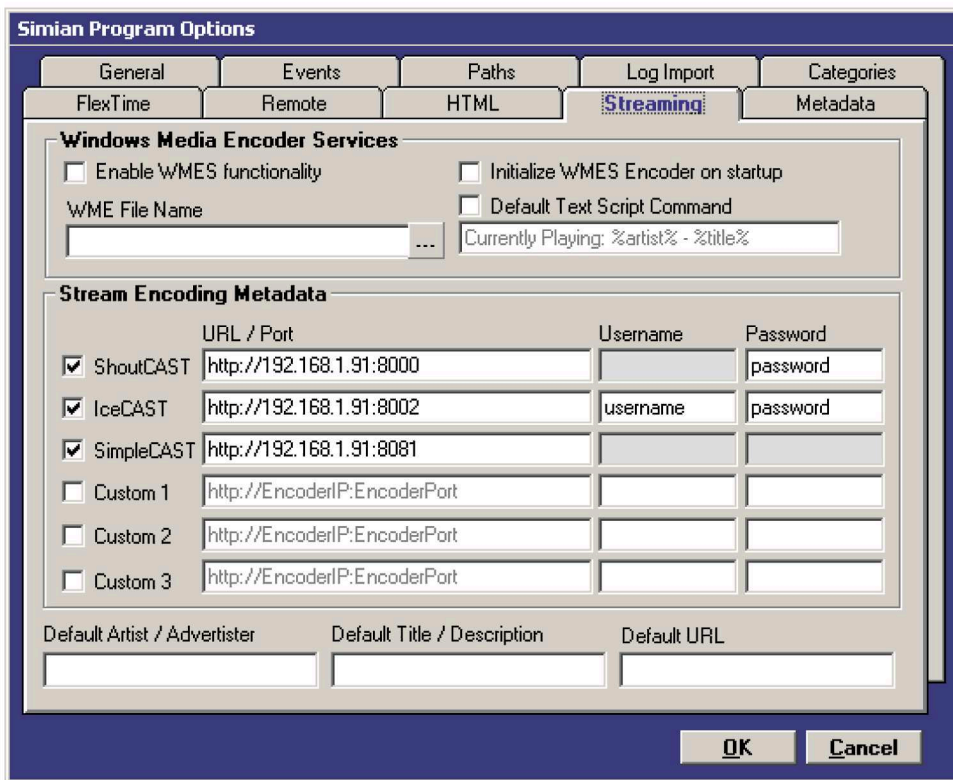

## What's new in Simian 2.0?

Simian 2.0 is an updated version of the Simian product. It offers many new features, including:

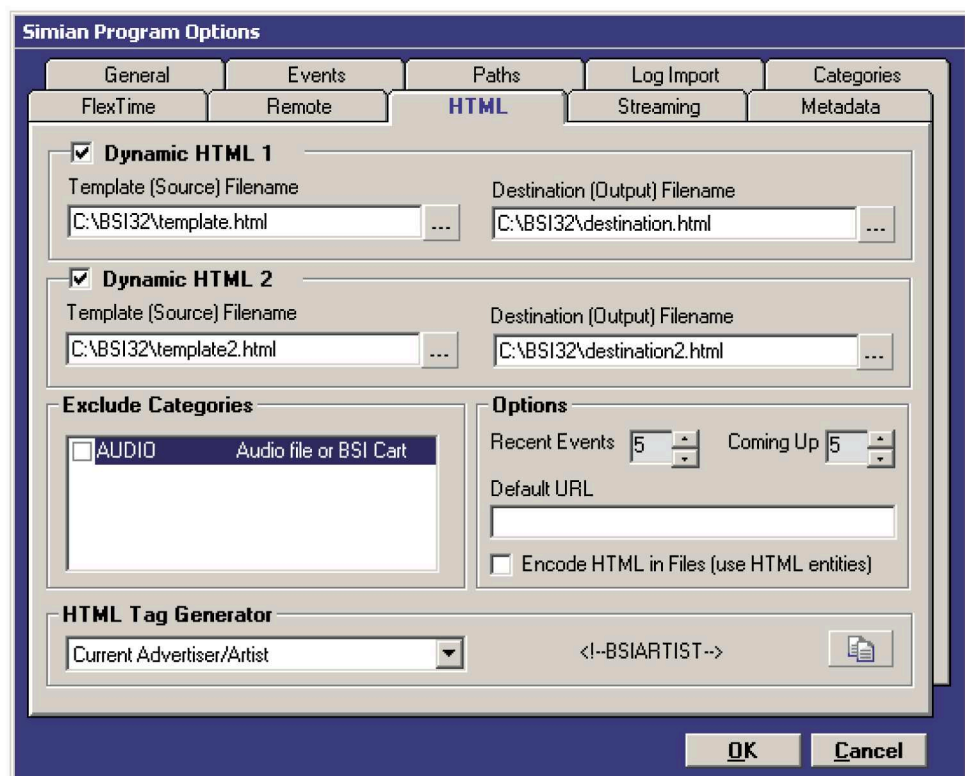

- Many new automation Macros. These include METADATA, SEGUE, SERIALPORT, STREAMDATA, TRIMFILE, UPDATEDDESCRIPTIONS, an improved CHAIN macro and more.
- Ability to output song and title data directly to your favorite streaming application via HTTP calls.
- Output metadata (PAD) via TCP or UDP packets using new Metadata tab.

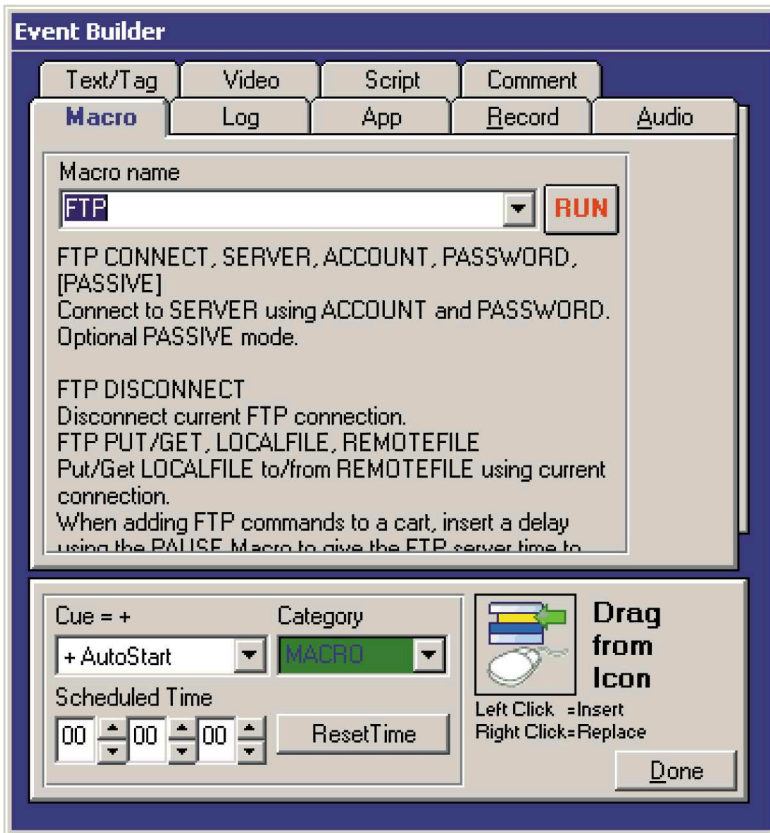

- Update metadata on streaming servers with new built-in metadata formats for popular streaming encoders (includes support for WME, IceCast, ShoutCast, SimpleCast and up to three custom profiles).

- Merge 2 user-created HTML files with Simian's improved HTML generator.

- PASSIVE mode is now supported by the FTP macro, increasing its compatibility with web servers.
- Ability to run macro commands directly from Event Builder using the new RUN Button.

- Ability to change the user interface color
